

# List of Test Ideas:

## 1- Navigation and UI:

- Verify smooth navigation across different sections of the app.
- Test the consistency of UI elements on various screens.
- Confirm responsive design for different devices and screen sizes.

## 2- Live Match Features:

- Test live match updates and score synchronization.
- Verify the display of team logos, kick-off times, and league tags.
- Check for accurate information about broadcasting channels.

## 3- News Section:

- Verify the display of news articles on the homepage.
- Test the functionality of clicking on news links.
- Check if the content is relevant and up to date.

## 4- Matches Main Page:

- Test the filter option (by tournament) functionality.
- Verify the calendar button for choosing dates.
- Test buttons for showing live matches and displaying matches for each day of the week.

## 5- Match Details Page:

- Test score synchronization for live matches.
- Verify the presence and functionality of panels (Statistics, Formation, Minute by Minute).
- Check for live updates in the Statistics panel.

## 6- Favorite Teams:

- Test the functionality of adding and removing favorite teams.
- Verify notifications for favorite team matches.
- Check if the screen displays each favorite team's last and next match.

## 7- Performance Testing:

- Conduct load testing to evaluate app performance under peak usage.
- Assess app response times for various functionalities.
- Test the app's behavior with a large dataset of matches and news articles.

## 8- Usability Testing:

- Evaluate the overall user experience with the app.
- Test the intuitiveness of navigation and user interface elements.
- Gather feedback on the app's design and ease of use.

## 9- Performance and Stability:

- Conduct performance testing for app responsiveness.
- Test app behavior under varying network conditions.
- Verify stability by running the app for an extended period.

# Prioritization:

## 1- High Priority:

- Live match features, ensuring real-time and accurate information.
- Navigation and UI consistency for a seamless user experience.
- Match Details Page features, including score synchronization and live updates.

## 2- Medium Priority:

- Matches Main Page functionality and filtering options.
- Favorite Teams functionality for user engagement.
- Performance testing to ensure optimal app response times.

## 3- Low Priority:

- News section functionality and content relevance.
- Usability testing for overall user experience.
- Testing responsiveness on different devices.
